### About Topview Systems LLC

Established in 2009, Topview is a woman-owned small business specializing in providing data solutions for extended enterprise, test, and support systems, including infrastructure upgrades and legacy systems upgrade. Topview's multi-faceted engineering services solve complex, mission-critical problems in the Aerospace, Defense and Government sectors.

Topview prides itself on deep technical and managerial experience and an unwavering commitment to quality and integrity.

### Core Capabilities

Hardware and Software Development- including avionics, guidance systems and telemetry processing for commercial aviation, military aircraft, launch vehicles and ballistic missile applications (all delivered using DO-178/254 approved processes)

Program Management and Consulting- risk management, complex schedule development and supply chain management improvement processes, engineering and quality process consulting

Test Systems and IV&V- including development of test systems for launch guidance, satellite positioning and reentry test bodies, as well as onboard multiplexer/de-multiplexer used on the International Space Station

Operations, Logistics and Asset Management- application of tools, oversight and support for process improvements in critical infrastructure, maintenance management, and asset management/utilization, and facility ground operations management

## Woman-Owned Small Business

*Topview Systems guarantees **quality** and **reliability**. We take pride in our quality management system and guarantee success and safety for every program that we participate in.*

### **Additional Products & Services**

Strategic Customer-Supplier Alignment- The strategic alignment allows Topview to analyze customer/supplier communications and create the action plans needed to achieve the perfect solution delivery while meeting program goals and budget. This solution is typically used to improve on-time delivery and profits.

Responsive Engineering- We draw from a national pool of best-in-class engineering talent to provide for your staffing needs. Many of our personnel have 15-25 years of experience in Commercial, Aerospace, Defense and Government projects.

Project Management- We also deliver fully managed custom development projects as a managed solution. We use our expertise in project management including Earned Value Management and Risk Management, combined with our systems engineering skills and experience to consistently deliver development solutions that streamline schedules while lowering cost.

Responsive Enterprise- Topview Systems delivers enterprise solutions designed to support the complexities of Aerospace, Defense, and Government Infrastructure programs utilizing the latest tools and technology.

### **Past Performance**

Topview has performed in projects dealing with risk management, safety and hazard analysis, reliability engineering, avionics, program analysis, test systems, and product lifecycle modeling. Please contact us to receive a detailed past performance booklet.
